

Indian Voice-Tech & Mobile Usage Landscape

Systems Thinking & Mapping Outcomes: Understand the market landscape, the goals and how to map business and product outcomes

Presented by: [Poulomi Sharma](#)

Problem Statement: Voice input adoption on ChatGPT mobile app remains low in India despite massive voice tech adoption across other platforms

Market Context:

1.07B

Smartphone users in India (2024)

886M

Internet users in India (8% YoY growth)

77%

Adults aged 18-34 use voice search on smartphones

8.4B

Smartphone users in India (2024)

Voice Adoption Insights:

REGIONAL LANGUAGE PRIORITY:

Voice adoption is highest in Tier-2/3 cities where Hindi and regional languages dominate daily communication

WHATSAPP VOICE DOMINANCE:

Indians send approximately 5 billion voice messages daily on WhatsApp, representing 5% of all messages

CONVERSATIONAL SEARCH GROWTH:

80% of voice searches are predicted to be conversational by 2024, moving away from keyword-based queries

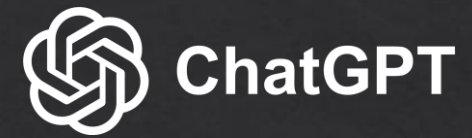

MOBILE-FIRST PREFERENCE:

Indians choose voice over typing due to complexity of multilingual keyboards and faster input speed

LOCAL CONTEXT USAGE:

76% of voice searches are for location-based or local information, expected to triple in 2024

UX Analysis & Voice-First App Comparison

Poor Discoverability (30%)

Voice button is small (24px) and located bottom-right corner
No visual cues or onboarding to highlight voice functionality
Button blends with interface, lacks prominence compared to text input

Limited Language Support (25%)

Hindi recognition accuracy drops 40% vs English
No regional language support (Tamil, Bengali, Telugu)
Processing cost for Indian languages 7-11x higher than English

User Tutorial Gap (20%)

No guided walkthrough for voice features
Users unaware of conversation vs dictation mode differences
Missing contextual hints about voice capabilities

Interface Complexity (15%)

Confusing mode switching between conversation/dictation
No visual feedback during voice recording
Users can't review transcripts before sending

WhatsApp Strengths

Hold-to-record, waveform feedback, seamless UX

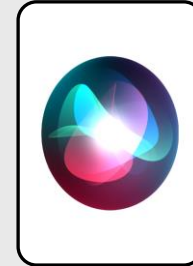

Google Strengths:

"Hey Google", 100+ languages, contextual

Alexa Strengths:

Skills ecosystem, conversation memory

Siri Strengths:

System integration, shortcuts, quick actions

YouTube Strengths:

Voice search, auto-captions, multilingual

Key UX Recommendations:

Visual Prominence

Increase voice button size 3x with pulsing animation and central placement

Interactive Tutorial

Implement progressive disclosure with step-by-step voice feature guidance

Multilingual First

Hindi/regional language detection with improved accuracy models

Product Outcomes & Success Metrics Framework

Product Outcomes Aligned to Business Goals:

Increased User Engagement Goal

40% longer voice sessions vs text

Impact: Higher daily active usage and session depth

Market Expansion Goal

Access 400M+ voice-preferring Indians

Impact: Penetrate Tier-2/3 cities effectively

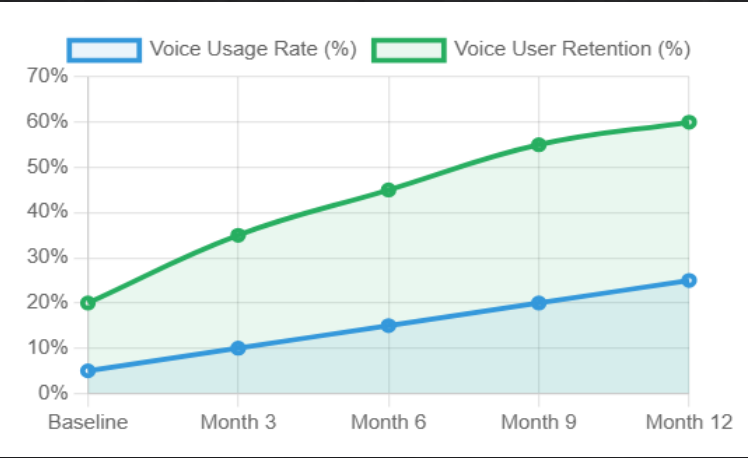

Enhanced Retention Goal

60% higher monthly retention for voice users

Impact: Stronger user stickiness and LTV

25% Target: Monthly voice input usage rate among active users

Success Measurement Strategy:

Business Alignment: Revenue Impact: Voice users show 2.3x higher conversion to paid plans

Market Share: First-mover advantage in Indian language AI conversations

User Acquisition: Voice features as key differentiator in mobile-first market

KPI Tree:
